Professional Summary

Information Technology undergraduate with a 9.2 CGPA and a strong interest in Artificial Intelligence, Machine Learning, and Agentic AI. Builds independent software prototypes focused on LLM reliability, memory-driven systems, retrieval-augmented generation, and developer tools. Interested in developing practical, reliable AI systems through experimentation, research, and hands-on engineering.

Education

Vardhaman College of Engineering 2024 – Present
B.Tech in Information Technology **CGPA: 9.2/10**
Hyderabad, India

Technical Skills

Programming: Python, C, C++
AI / ML: Machine Learning, Scikit-learn, Pandas, NumPy, LLM Applications, RAG, Agentic AI
Backend: FastAPI, Flask, Node.js, Express.js, REST APIs
Frontend: React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS
Databases: MySQL, SQLite, MongoDB, ChromaDB
Tools: Git, GitHub, Docker, VS Code, GitHub Actions

Selected Projects

PromptShield CI – LLM Security Testing GitHub
Built a prototype security testing framework for LLM-integrated applications. Uses Python AST parsing to extract prompts, generates adversarial attacks through a local Mistral model, evaluates target responses, and produces vulnerability reports with risk scores and remediation suggestions.

POINT.FEEDBACK – Visual Developer Feedback GitHub
Developed a prototype visual feedback platform with an embeddable TypeScript widget. Captures DOM context, screenshots, browser telemetry, and voice feedback, with a FastAPI backend and React dashboard for organising and analysing reports.

OpsBrain AI – Industrial Knowledge Intelligence GitHub
Building a retrieval-augmented knowledge assistant for industrial documents and incident records. Implements document ingestion, heading-aware chunking, vector retrieval, confidence-based responses, and source citations using FastAPI and ChromaDB.

Déjà Vu – Agentic Engineering Memory GitHub
Developed a prototype engineering change-risk assistant using Hindsight memory to retrieve relevant past experiences and engineering lessons. Produces explainable SHIP, REVIEW, or HOLD recommendations based on retrieved context.

Ripple – Git Change Intelligence GitHub
Created a Python CLI tool that analyses Git history to identify files that frequently change together and flags potentially overlooked files in staged changes. Includes JSON output and GitHub Actions integration.

Achievements & Hackathons

- **PromptWars Virtual 2026:** Achieved a Top 50 leaderboard position in Challenge 3 and Top 400 positions in Challenges 2 and 4.
- **HackerRank Orchestrate – August 2026:** Ranked **370 out of 1,983 participants** for building and deploying an AI agent.
- **Google Solution Challenge 2026:** Worked on a smart supply-chain solution involving predictive logistics and delay-risk analysis.
- **Google Agentic AI Agentathon:** Participated in an offline hackathon focused on building AI-powered agents.

Certifications & Professional Learning

- **Google Cloud Gen AI Academy APAC 2026 – Cohort 2**
- **End-to-End Enterprise AI: From Modeling to Agents** – Vardhaman College of Engineering, August 2026.
- **Build with AI Agent Builder Camp** – GeeksforGeeks and Google for Developers.
- **Data Visualisation Tools** – Vardhaman College of Engineering, 93% assessment score.
- **Database Management Systems (RDBMS) & Microsoft Fabric SQL** – Udemy, 25 hours.
- **Programming using Java** – Infosys Springboard, May 2026.
